Kidney Disease and Phosphorus

What is phosphorus?

Phosphorus is a mineral found in many foods. Phosphorus helps keep your bones strong and healthy. As your kidney function declines, your blood phosphate level may rise, causing itchy skin, a loss of calcium from your bones, and painful bony deposits in your heart, skin, joints and blood vessels.

What is the recommended amount of phosphorus in blood?

This depends of how much of your kidneys are working:

- If you have lower kidney function and you are not having dialysis treatments, the range is 0.87 to 1.49 mmol/L.
- If you are having dialysis treatments, the range is 1.13 to 1.78 mmol/L.

How do I keep my phosphorus levels normal?

- You may need to limit the amount of phosphorus you eat.
- You may be prescribed a phosphorus binder medication.
- If you are on dialysis, making sure you get regular dialysis treatments as prescribed by your doctor.

What foods contain phosphorus?

Some foods naturally contain more phosphorus than others. Meat, poultry, and fish contain phosphorus, as well as good quality protein. Your dietitian will help you with the amount of protein that your body needs.

Refer to the food chart on the next few pages for more details.

What is phosphorus binder medication?

Your doctor may prescribe a medication that lowers phosphorus in your blood. This is called a phosphorus or phosphate binder.

Phosphorus binder medication acts like a sponge to soak up the phosphorus from the food you eat so less phosphorus goes into your blood. For this medication to work properly, you must always take it with food.
Phosphorus binder medication continued…

Some names of this medication are: calcium carbonate (Tums), calcium acetate (Phoslo), Sevelamer (Renagel) and lanthanum carbonate (Fosrenol).

The amount of this medication you need depends on your diet and your blood phosphate level. You can talk to your doctor and/or dietitian about this.

What food should I limit and what food should I choose?

| **Beverages** | • Cola carbonated beverage, Dr. Pepper  
• Iced tea, lemonade, fruit punch and powdered drink crystals made with phosphate additives  
• Beer  
• Hot chocolate and cocoa drinks  
• Non-dairy creamer  
• Flavoured water | • Non-cola soft drinks (ginger ale, sprite, 7-Up, lemon/lime soda, root beer)  
• Homemade iced tea, lemonade and fruit punch without phosphate additives  
• Alcohol (gin, vodka, whiskey, wine) but only as advised by your doctor.  
• Coffee, tea  
• 100% fruit juice without added calcium |
| **Other** | • Nuts and seeds, including chia or flaxseeds  
• Chocolate, chocolate bars  
• Hazelnut spread  
• Nut butters  
• Tahini | • Unsalted popcorn, pretzels, corn chips  
• **Lower Phosphorus Baking Soda Substitute:** Instead of 1 teaspoon (5 ml) baking soda, try ¼ teaspoon (1.25 ml) baking soda + ½ teaspoon (2.5 ml) cream of tartar |
Kidney Disease and Phosphorus

Where does phosphorus in food come from?

Phosphorus in food comes from 2 sources:

1. **Naturally occurring in food:** Phosphorus is naturally found in food such as whole grains, dried beans and lentils, meat and dairy products.

2. **Additives:** Phosphorus is added to food for many reasons such as to make food creamier, add flavour, maintain the juiciness of meat, reduce acidity, and increase shelf life.

What are phosphorus additives?

- 90 to 100% of phosphorus additives are absorbed by the body. Only about 60% of phosphorus naturally found in food is absorbed by the body.
- It is important to reduce and control your intake of phosphorus additives as a key part of managing phosphorus levels in your body.
- The amount of phosphorus a food contains does not legally need to be included on the Nutrition Facts Panel of packaged foods. Therefore, it is important to look at the ingredient list for ‘hidden’ sources of phosphorus.

- **Phosphoric acid**
- **Pyrophosphate**
- **Polyphosphate**
- **Hexametaphosphate**
- **Dicalcium phosphate**
- **Monocalcium phosphate**
- **Aluminum phosphate**
- **Sodium polyphosphate**
- **Sodium tripolyphosphate**
- **Tricalcium phosphate**
- **Trisodium phosphate**
- **Tetrasodium phosphate**

**Helpful Hint**

Look for:
- **Phos**
- **phos**
Food products that commonly contain phosphorus additives:

<table>
